

BEFORE

Ricardo was 52, had an annual check-up, and ran three times a week. Eight months after his last "all normal" results, he collapsed in the office parking lot with a heart attack.

Between what your lab calls normal and what the science of longevity calls optimal lies a silent window of ten to twenty years. That window is where disease is built — and where the trajectory can still be changed.

In BEFORE, Dr. Getulio Amaral Filho distills twenty years of clinical practice into a map the conventional check-up never draws: 16 biomarkers in 4 groups that separate normal from optimal, the four-pillar ACTS method, and the Rule of Two — every quarter, two focuses with the highest potential to shift trajectory.

This is not wellness. It is evidence-based medicine, twenty years of patient care, real cases — for those who still have the whole decade ahead, and for those who have only the next one.

*The best time to start
was ten years ago.
The second best is today.*

Dr. Getulio Amaral Filho

Nephrologist (Brazilian Medical Council CRM-PR 21,876), coordinates the Nephrology Residency at Santa Casa de Londrina. Founder of Plenya — an integrated medicine clinic for health, performance, and longevity.
